BMW - electrical systems - WIRING DIAGRAM

So the alternator warning light is doing two things: It provides the excitation current to kick the alternator into functionality, AND it acts as a warning light by glowing when there's more than a two-volt difference across the light's two wires.

Troubleshooting An Alternator Warning Light | BMW Car Club

Understanding the Alternator • Four wires connect the alternator to the rest of the charging system. • B is the alternator output

wire that supplies current to the battery. • IG is the ignition input that turns on the alternator/regulator assembly. • S is used by the regulator to monitor charging voltage at the battery.

The following electrical wiring diagram applies for Triumph Rocket III motorcycle series. In this manual you will find detail

information about the electrical system, wiring harness and diagram, electrical components description, illustration and troubleshooting (including battery system, alternator, relay, headlight, rearlight, etc).

Electrical Schematic – Circuit Wiring Diagrams

As Proslack says, there needs to be a ground from the alternator case to the engine. Either through the alternator mount if metal, or a wire running from the back of the alternator case to the timing cover. Adding the wire is cheap protection if missing. But from what you describe, the alternator doesn't sound like the reason for not starting.
