10-micron filters should be replaced every fifty hours of engine operation. Keeping this filter clean and fresh will help protect the other fuel filters on the engine and extend their service life. And always carry a spare on board, just in case you get a load of bad gas and the filter gets overwhelmed.

The principal measure of diesel fuel quality is its cetane number. A cetane number is a measure of the delay of ignition of a

diesel fuel. A higher cetane number indicates that the fuel ignites more readily when sprayed into hot compressed air. European (EN 590 standard) road diesel has a minimum cetane number of 51.

Do's: • READ SAFETY INSTRUCTIONS AND ALL OTHER CHAPTERS IN THIS MANUAL • Allow 500 hours of exercise workload to break in the new engine. (60-85% load is recommended) • Regular maintenance of fluids and filters. Oil & filters are cheap, engines are not. • Keep fluids filled to their proper levels. Oil that is down 1/3 quart is too low!

The Diesel engine (also known as a compression-ignition or CI engine), named after Rudolf Diesel, is an internal combustion engine in which ignition of the fuel, which is injected into the combustion chamber, is caused by the elevated temperature of the air in the cylinder due to the mechanical compression (adiabatic compression). Diesel engines work by compressing only the air.
