A flight management system (FMS) is a fundamental component of a modern airliner's avionics. An FMS is a specialized computer system that automates a wide variety of in-flight tasks, reducing the workload on the flight crew to the point that modern civilian aircraft no longer carry flight engineers or navigators. A primary function is in-flight management of the flight plan.

Nor is this problem confined to the USA – or even to the here and now. The Chinese government's Xinhua agency reports that Japan has also grounded its F-15 fleet. Japan's F-15Js were built locally under license, on a more recent production schedule, but their oldest planes do date back to 1980. This is a precautionary measure until more is known.
