Flintknapping or knapping is done in a variety of ways depending on the purpose of the final product. For stone tools and flintlock strikers, chert is worked using a fabricator such as a hammerstone to remove lithic flakes from a nucleus or core of tool stone. Stone tools can then be further refined using wood, bone, and antler tools to perform pressure flaking.

Knapping - Wikipedia

The culture spans from approximately 17,000 to 12,000 BP, [is this date calibrated?] toward the end of the last ice age. The Magdalenian tool culture is characterised by regular blade industries struck from carinated cores. Typologically, the Magdalenian is divided into six phases which are generally agreed to have chronological significance.

The Oldowan is the archaeological term used to refer to the stone tool industry that was used by hominids during the earliest Palaeolithic period. For a long time it was thought that the Oldowan was the earliest stone tool industry in prehistory, from 2.6 million years ago up until 1.7 million years ago.
