The International Journal of Oral & Maxillofacial Implants

Bone grafting is a surgical procedure that replaces missing bone in order to repair bone fractures that are extremely complex, pose a significant health risk to the patient, or fail to heal properly. Some kind of small or acute fractures can be cured but the risk is greater for large fractures like compound fractures. Bone generally has the ability to regenerate completely but requires a very ...

Bone grafting - Wikipedia

Due to the growing demand for dental implant-related ridge augmentation procedures as well as tumor- and trauma-related reconstruction, expertise in bone graft harvesting remains crucial.

Atlas of Oral and Extraoral Bone Harvesting - Quintessence

Guided bone regeneration (GBR) and guided tissue regeneration (GTR) are dental surgical procedures that use barrier membranes to direct the growth of new bone and gingival tissue at sites with insufficient volumes or dimensions of bone or gingiva for proper function, esthetics or prosthetic restoration. Guided bone regeneration typically refers to ridge augmentation or bone regenerative ...

The bone, once formed, is maintained dynamically through two different processes, modeling and remodeling , which are also employed in bone fracture recovery. In bone modeling process, the new bone is formed without prior bone resorption, while in the bone remodeling process, bone formation follows bone resorption . Bone modeling is vigorous during growth, altering the shape and size of the bone.

Antibiotic Prophylaxis Prior to Dental Procedures Key Points. Compared with previous recommendations, there are currently relatively few patient subpopulations for whom antibiotic prophylaxis may be indicated prior to certain dental procedures.

Antibiotic Prophylaxis Prior to Dental Procedures

La citrulline (C 6 H 13 N 3 O 3) est un acide aminé non protéinogène. La citrulline a été identifiée pour la première fois il y a plus de 70 ans à partir de la pastèque Citrullus lanatus dont elle tient son nom. La pastèque est la plus importante source de citrulline connue à ce jour (0,7 à 3,6 g · kg⁻¹ de pulpe selon l'espèce et le degré de maturité) [2].
