## **bone building body shaping pdf**

A bone is a rigid organ that constitutes part of the vertebrate skeleton. Bones protect the various organs of the body, produce red and white blood cells, store minerals, provide structure and support for the body, and enable mobility. Bones come in a variety of shapes and sizes and have a complex internal and external structure.

Raymond V. Damadian, MD, conceived the IDEA of using NMR (MR) to detect medical disease and proposed the MR body scanner to accomplish it. To prove its feasibility, he conducted experiments and DISCOVERED that cancer tissues produce abnormal NMR signals compared to normal tissues, with relaxation times that are markedly elevated relative to normal tissues.
