Bone char is also used as a black pigment for artist's paint, printmaking, calligraphic and drawing inks as well as other artistic applications because of its deepness of color and excellent tinting strength. Bone black and ivory black are artists' pigments which have been in use since historic times--both by old masters like Rembrandt and Velázquez, and more modern painters such as Manet and ...

Bone char - Wikipedia

Bone china is a type of porcelain that is composed of bone ash, feldspathic material, and kaolin. It has been defined as "ware with a translucent body" containing a minimum of 30% of phosphate derived from animal bone and calculated calcium phosphate. Bone china is the strongest of the porcelain or china ceramics, having very high mechanical and physical strength and chip resistance, and is ...

1. Introduction. Magnesium (Mg) is a potential candidate for orthopedic implants because Mg and its alloys exhibit good biocompatibility and have suitable mechanical properties that are similar to those of bone , .Moreover, unlike the metals, such as titanium, stainless steel, and cobalt-chromium, that are used for conventional implants, Mg is biodegradable under physiological conditions.

Biomimetic porous Mg with tunable mechanical properties
