book fiber optic communications pdf

Fiber-optic communication is a method of transmitting information from one place to another by sending pulses of light through an optical fiber. The light forms an electromagnetic carrier wave that is modulated to carry information. Fiber is preferred over electrical cabling when high bandwidth, long distance, or immunity to electromagnetic interference are required.

An optical fiber is a flexible, transparent fiber made by drawing glass or plastic to a diameter slightly thicker than that of a human hair. Optical fibers are used most often as a means to transmit light between the two ends of the fiber and find wide usage in fiber-optic communications, where they permit transmission over longer distances and at higher bandwidths (data rates) than electrical ...

We're Not Sure Exactly What To Say Here... If you were following the news in tech this month, you undoubtedly surely saw the headlines about Google Fiber, announcing they were shutting down Google Fiber's network in Louisville, KY, in about 60 days, and walking away, leaving subscribers to scramble to get alternative service.
