Ultra high frequency (UHF) is the ITU designation for radio frequencies in the range between 300 megahertz (MHz) and 3 gigahertz (GHz), also known as the decimetre band as the wavelengths range from one meter to one tenth of a meter (one decimeter). Radio waves with frequencies above the UHF band fall into the super-high frequency (SHF) or microwave frequency range.

### **Ultra high frequency - Wikipedia**

Tone burst is an obsolete method of selective calling where the radio transmits a single 0.5- to 1.5-second audio tone at the beginning of each transmission. This scheme existed before circuitry for CTCSS had been developed. This method was in wide use in the United States from the 1950s through the 1980s. Manned spaceflight operations made frequent use of this method.

Projects and info \*The Xtal Set Society - a must-visit site, a few select links. Two projects on line. If you haven't built a crystal set before, the Oatbox Radio is about as reliable as they come, and never fails to bring a smile the face of anyone who hooks it up to an antenna and ground for the first time.
